

## ABSTRAK

**Aninda Regita Putri Darna. R0316009. 2019. ASUHAN KEBIDANAN TERINTEGRASI PADA NY. T UMUR 26 TAHUN DI PUSKESMAS PURWOSARI SURAKARTA. Program Studi D III Kebidanan Fakultas Kedokteran Universitas Sebelas Maret.**

**Ruang Lingkup:** Asuhan kebidanan terintegrasi atau *Continuity of Care (COC)* bertujuan untuk meningkatkan mutu pelayanan kesehatan dari masa kehamilan, bersalin, nifas, bayi baru lahir hingga keluarga berencana secara komprehensif sesuai dengan standar asuhan kebidanan.

**Pelaksanaan:** Asuhan kehamilan Ny.T diberikan sebanyak dua kali, persalinan secara normal spontan di rumah sakit, kunjungan nifas tiga kali, kunjungan bayi baru lahir (BBL) tiga kali, dan kunjungan keluarga berencana (KB) dua kali.

**Evaluasi:** Asuhan kebidanan terintegrasi pada Ny.T didapatkan hasil selama masa kehamilan ibu dalam keadaan normal, tidak ada komplikasi pada persalinan dan nifas. Pada kunjungan ketiga BBL, bayi mengalami miliariasis dan pada kunjungan KB, ibu memilih menggunakan KB Implant.

**Simpulan dan Saran:** Terdapat kesenjangan pada asuhan persalinan, nifas dan BBL yaitu IMD hanya dilakukan selama 30 menit, vitamin A 200.000 IU sebanyak dua kapsul diberikan pada nifas hari keempat dan perawatan tali pusat bayi masih tertutup. Diharapkan RS Panti Waluyo memfasilitasi pelaksanaan IMD sesuai dengan teori, memberikan dua kapsul Vitamin A 200.000 IU segera setelah persalinan sesuai dengan program pemerintah dan melakukan perawatan tali pusat terbuka sesuai dengan *evidence based*.

## **ABSTRACT**

*Aninda Regita Putri Darna. R0316009. INTEGRATED MIDWIFERY CARE ON Mrs. T AGED 26 YEARS OLD AT COMMUNITY HEALTH CENTER OF PURWOSARI, SURAKARTA. Associate's Degree (Diploma III) Program in Midwifery, the Faculty of Medicine, Sebelas Maret University, Surakarta 2019.*

**Scope:** *Integrated midwifery care or continuity of care (COC) aims at improving the quality of health services from gestation, delivery, postpartum, and neonatal to family planning program periods comprehensively according to the standards of midwifery care.*

**Implementation:** *The COC on Mrs. T during the antenatal period was done for two visits. The delivery was spontaneous and normal at the hospital. The postpartum care was done with three visits. The neonatal care was done with three visits. The family planning program care was done with two visits.*

**Evaluation:** *The implementation of the COC on Mrs. T shows that her pregnancy was normal, complication was not found in the delivery and postpartum periods. On the third visit during the neonatal period, the infant experienced miliaria sweat rash (miliaria), and in the family planning program visit, the mother chose implant birth control.*

**Conclusion and Recommendation:** *Gaps were found in the delivery, postpartum, neonatal cares. The early breastfeeding initiation was done for 30 minutes, and Vitamin A in the dosage of 200.000 IU as many as two capsules was administered in day 4 of the postpartum care period, and the umbilical cord of the infant was exposed to closed treatment. Thus, Panti Waluyo Hospital is expected to facilitate the implementation of the early breastfeeding initiation according to the existing theories, Vitamin A in the dosage of 200.000 IU as many as two capsules are administered immediately after the parturition as recommended by the government, and umbilical cord is intervened with open treatment in accordance with evidence-based treatment.*
