

## ABSTRAK

**THERESIYA SHINTA YULIANA. R0316060. 2019. ASUHAN KEBIDANAN BERKELANJUTAN PADA NY L UMUR 24 TAHUN DI WILAYAH PUSKESMAS SETABELAN SURAKARTA. Program Studi D III Kebidanan Fakultas Kedokteran Universitas Sebelas Maret Surakarta.**

**Ruang lingkup** : Asuhan kebidanan berkelanjutan pada Ny. L meliputi asuhan kehamilan, persalinan, nifas, BBL dan keluarga berencana. Perencanaan asuhan dilakukan secara berkelanjutan mulai dari hamil hingga KB sesuai dengan standar asuhan kebidanan.

**Pelaksanaan** : Asuhan kehamilan berlangsung normal sesuai standar pelayanan antenatal, persalinan berlangsung normal sesuai APN, asuhan nifas dan BBL berlangsung normal. Pada asuhan KB ibu diberi konseling tentang pemilihan alat kontrasepsi.

**Evaluasi** : setelah dilaksanakan asuhan kebidanan berkelanjutan pada Ny. L, didapatkan kondisi kehamilan dengan anemia ringan, asuhan persalinan diberikan sesuai APN, masa nifas dan BBL berlangsung normal, serta ibu memilih untuk menggunakan KB kondom

**Kesimpulan dan Saran** : asuhan kebidanan berkelanjutan pada Ny. L dari hamil sampai KB tidak ditemukan masalah, dan kesenjangan dengan teori.

**Kata kunci:** asuhan kebidanan, berkelanjutan, ibu, bayi

## **ABSTRACT**

*Theresiya Shinta Yuliana. R0316060. CONTINUITY OF CARE ON Mrs. L, AGED 24 YEARS OLD AT THE WORK REGION OF COMMUNITY HEALTH CENTER OF SETABELAN, SURAKARTA. Associate's Degree (Diploma III) Program in Midwifery, the Faculty of Medicine, Sebelas Maret University, 2019.*

**Scope:** *The continuity of care (COC) on Mrs. L consisted of gestation, delivery, postpartum, neonatal, and family planning care. The planning of care was conducted from gestation to family planning in accordance with midwifery standards of care.*

**Implementation:** *The COC was conducted normally in accordance with antenatal standard of practice, delivery was performed normally in accordance with normal delivery care, postpartum and neonatal cares were conducted normally. During the family planning care, the mother was given counseling on the selection of contraception methods.*

**Evaluation:** *After the COC on Mrs. L had been conducted, it was found that pregnancy was with mild anemia. Delivery care was given in accordance with normal delivery care. Postpartum and neonatal occurred normally, and the mother chose condom as a birth control method.*

**Conclusion and Recommendation:** *No problems and gaps with theory were found during the COC on Mrs. L. from gestation to family planning periods.*
